Full Agentic Workflow

NBA Kalshi paper-trading agent · decide loop, sceptic veto, and market-graded learning

Guard rails (always on)

As-of cutoffs	LLM cache	Fail-closed LLM	Kill switch	Public data only
no lookahead	offline replay	error → no trade	−$100 / day	no private info

Figure. Decide loop (steps 1–9), fail-closed no-trade exits, and the post-day learning loop that writes notebook rules only after a split-gate CLV test.
